DETROIT, MI

- High-end residential design and planning
- Material specification and jobsite preparation
- Coordinating suppliers, construction contractors and trades
- Project budgeting and cost controlling

To whom it may concern:

I have formulated, planned and implemented industry-leading sustainable building processes that result in quadruple net zero real estate by way of total energy, carbon, waste and water measurement. Utilizing my deep domain expertise with key sustainability performance metrics I factually enhanced the quantifiable social and governance value of the total real estate process through intuitive scope three supplier engagement. As such, the building asset is unmatched sustainably from the lens of its entire lifecycle, seamlessly verifies building design performance and automatically values ESG indicators for capital markets. All of which clearly impacts and is directly translatable through the project's and/or asset's operational cost, net operating income, cost of capital and ROI. This market-based, high performance sustainable building, residence, asset or portfolio is scientifically conveyed in an easy turnkey customer process by the CZERO ESG-Grade Product. Some notable product, process and performance achievements include over a quarter billion in transformative new construction esg-grade projects, an industry-specific key client pipeline, tappable tech tools for optimal building/portfolio data needs and a successful green lending and asset management b2b product vertical.

One of the key building blocks of my career was being part of a team of enthusiastic entrepreneurs who opened and operated a resource center in Zurich, Switzerland for Sustainable Republic AG, a company that was founded in 2015. The sustainable resource center was equipped entirely with sustainable materials, products, and technologies. In my capacity as a member of the Board of Directors, I was responsible for managing business administration, operations, legal, finance, accounting, and governance while steering and executing c-suite deliverables.

When it comes to sustainability, the strategy must be to embed key performance indicators of measurement-based sustainability into the corporate legal structure. This is accomplished chiefly through the entity's articles of incorporation, annual tracking, reporting and allocating equipped human capital to manage the division or department. As brand awareness is heightened, targets are achieved customer sentiment is increased, product, service or organizational-wide innovation is reached and the multi-faceted needs facing society and business are simultaneously achieved.

I have continued to be driven by better, more intelligent ways of facilitating sustainable business in the twenty-first century. My expertise in ESG and sustainability is comprehensive, fully capable of being granularly applied to every industry while adding definitive value across professional disciplines.

If you are interested in CO's ESG fund and unprecedented sustainable real estate then feel free to contact me!

Sustainable Regards,

Andrey F. Burrell
